EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows to correct typographical errors:

In line 1 of claim 23, "of one" has been replaced by -- one of --.

In line 13 of claim 29, "pivtally" has been replaced by -- pivotally --.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the most relevant prior art will be discussed.

Thorne et al. (U.S. 5,951,582) discloses a skin incision device having a casing, cover (240), blade (310), actuator means (320, 324, 326), and carriage means (84, 110, and 58) as seen in fig. 19-25.

Independent Claim 21 of the instant application includes the limitation that the force of contact on the bottom surface of the casing with the skin is constant regardless of the force applied to the cover which distinguishes the instant invention from Thorne et al. In particular, the actuator means is directly connected to both the blade and the casing throughout actuation of the blade and the force applied to the cover will be transmitted to the casing through the actuation means.

Independent Claim 28 includes the first pivot point being an obround positioned over a retainer peg. Thorne et al. in view of Cusack (U.S. 5,314,441) discloses two pivot points but fails

to disclose or fairly suggest that the first pivot point is an obround hole positioned over a retainer peg, the first pivot point is in rotatable and cam relation to the casing during movement.

Independent Claims 29 and 35 include a knuckle that is spaced from the blade when in the pre-actuated position, the knuckle contacting the blade during movement between the pre-actuated position and the post-actuated position. The knuckle of Thorne et al. is not spaced from the blade when in pre-actuated position and in contact with the blade during movement between pre-actuated to post-actuated position.

The structure given to the carriage in claim 33 is not disclosed or fairly suggested by Thorne et al. in view of Cusack et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
